

The global slab
one per application
up to 64 key/value pairs
size fixed at creation, forever
outlives every member

OptIn
creates that account's slab
and raises that account's
minimum balance

Alice's local slab
up to 16 pairs

Bob's local slab
up to 16 pairs

one more slab per
opted-in account

CloseOut runs your code.
ClearState does not have to.
Either way the slab is deleted
and the app cannot refuse.
